

### **Potted Amaryllis, Two Stems**

To grow amaryllis bulbs indoors in winter: plant one bulb in a 7- or 8-inch diameter pot with drainage holes. Add potting soil, while positioning the bulb so the top third ("neck and shoulders") is above the soil line. Once watered in, an amaryllis bulb takes its time before starting to grow. Expect huge blooms within 8 to 12 weeks, or sooner. TIP: Amaryllis bulbs are slow to start growing. Once the action begins, stems grow quickly and benefit from good sunlight. Sun-starved stems can get leggy. For premium varieties of amaryllis bulbs in huge sizes, at wholesale prices, see [Colorblends.com](http://Colorblends.com), or call 888-847-8637.
